

LS-002 / HYPOTHESIS DOCUMENT

Hypothesis Document

Three sections, each owned by one discipline. The document that transforms literary analysis and data literacy into a community intervention.

SECTION 01 / OWNED BY: ENGLISH

The Problem

Frame the community challenge. Show how close reading of the novel deepened your understanding. The novel is the analytical lens, not background reading.

PROMPT 1

What is the community challenge? Be specific: who is affected, how, and where?

PROMPT 2

What did close reading of the novel reveal about this challenge that was not visible before?

PROMPT 3

What systems does the novel make plain? How do those systems connect to the community reality?

PROMPT 4

What is the gap between what exists and what should exist?

The Evidence

Ground the problem in real numbers. Community data, sourced and contextualized. Without this section, the hypothesis is an opinion.

PROMPT 1

What data sources did you use? Name them specifically: census data, public health databases, city agency reports, community surveys.

PROMPT 2

What do the numbers reveal about the scope and severity of the challenge?

PROMPT 3

What does the data hide or obscure? What is missing from the official record?

PROMPT 4

How does the data connect to what the novel rendered visible? Where do text and numbers agree? Where do they diverge?

KEY DATA POINTS

[illegible]

The Hypothesis & Proposed Intervention

The synthesis. A specific, testable claim about why young people relate to the challenge the way they do and what intervention would change that behavior. The four movements structure this section.

ASSET MAPPING

What assets exist in the community relevant to this challenge? What categories (social networks, knowledge, cultural practices, institutional access, economic resources)? What did the novel reveal about the asset landscape?

FLOW ANALYSIS

How do those assets move? Where are they blocked? What mechanisms control distribution? What community data reveals the circulation patterns?

STRATEGIC RESPONSE

Given what you have mapped and traced, what would actually change the dynamics? What is your intervention plan? What does it target and why?

CREATIVE RESTORATION

What does the intervention build? How is it rooted in community assets? What would restoration look like for this challenge?

YOUR HYPOTHESIS

State your testable claim: "Young people in [community] [behavior] because [reason]. [Intervention] would result in [measurable outcome]."
